

ABOVE GROUND COVER BUYING TIPS

- 1.** When ordering be sure to order by actual pool size. Depending on your choice of cover it will come with either a **4' or 5' overlap**, which is the extra material extending over the entire pool. All pool covers are rectangular in shape.
- 2.** Pool size should be measured from **inside wall to inside wall** in both the width and length direction for your shape pool.
- 3.** Pools with protruding step sections or built in loveseats, cuddle coves or attached spas or any other **custom configuration**, should measure the **longest length and widest width** of the pool. It will be necessary to purchase a larger pool size based on these measurements.
- 4.** All covers should be closely positioned with **water tubes or water blocks** around the entire perimeter to hold the cover in place and prevent the wind from getting underneath. **Do not** use cement blocks or weights of any type, or tie bungee cords, to grommets to secure cover. This will void your warranty.

IN-GROUND COVER BUYING TIPS

- 1.** When ordering be sure to order by your actual pool size. Depending on your choice of cover it will come with either a **3' or 4' overlap**, which is the extra material extending over the entire pool.
- 2.** Pool size should be measured from **inside wall to inside wall** in both the width and length for oval shaped pools or diameter for round shaped pools.
- 3.** Be sure to purchase a **4' overlap** if your pool has a **7"- 9" top rail**. For pools with an extra large top rail of 10" or more please order the next pool size up.
- 4.** **Ice Equalizer pillows** should be used on both mesh and solid covers to protect pool walls from ice expansion.
- 5.** Use the **winch and cable** to secure cover down. All above ground covers have a winch and cable included. Do not tie weights or bungee the cover down from the grommets in any way as it voids the warranty.
- 6.** If your pool does not have a top rail then we suggest securing your pool cover down with **cover sealer** as cover clips cannot be attached.
- 7.** Above ground rectangular pools with full decks should purchase rectangular in-ground covers and use **water tubes** to secure the cover down. Be sure to use your actual pool size when ordering an in-ground cover.
- 8.** All in-stock above ground pool covers are designed to fit true oval and round pool sizes. If you have an **odd shape** above ground pool these covers will not fit.
